

Condition Assessment

Have you found damage in your pipe or pressure vessel?

Are you alarmed by corrosion or welding defects in your pipework or plant?

Are you concerned your infrastructure is operating beyond its design life?

Do you need to know if it is Fit For Purpose?

MACAW can provide you with the information you need...

MACAW Engineering has extensive experience in condition assessments, fitness for purpose assessments and detailed material, corrosion and welding assessments.

From initial site inspections through detailed studies to final reports MACAW will provide you with an honest view of the condition of your pipeline or plant allowing you to make informed decisions about repair or replacement options.

Why MACAW Engineering?

- Site engineers with extensive experience of working on live systems.
- Principal consultants offer extensive knowledge of material, corrosion and welding, many with over 30 years experience.
- Facilities for metallurgical, pressure, corrosion and fatigue testing.
- Experience in all aspects of non destructive testing
- Provision of Finite Element Analysis and detailed stress analysis providing Fitness For Purpose data for remaining life calculations.
