

Laboratory Services

MACAW Engineering operate its own dedicated testing facilities and metallographic laboratory with the latest digital optical microscopes.

These facilities allow MACAW to offer cost effective investigations to any weld, material or corrosion problem.

Adding Value to Standard Tests

MACAW can specify, project manage, witness, and interpret standard test results from a range of UKAS accredited laboratory including Tensile, Charpy, Chemical Analysis and Drop Weight Tear Tests.

In addition MACAW offer consultancy on both destructive and non-destructive test regimes and can provide advice on the most appropriate techniques to use.

Test Rigs

MACAW Engineering have the knowledge and facilities to build bespoke test rigs for a range of applications;

- Corrosion testing of coatings
- Corrosion testing of materials
- Full scale fatigue testing of high pressure steel gas pipelines.
- Pressure Testing
- Design and operation consultancy.

Why MACAW Engineering?

MACAW Engineering employs some of the leading material, corrosion and welding experts in the country, with many principal consultants having over 30 years experience.

MACAW prides itself in employing engineers with a extremely high standard of technical capability and experience.
